

Self-ORION Governed Development Loop

Authority Boundaries

No self-merge primitive. Strongest internal outcome: RECOMMEND_HOST_PROMOTION.

Protected evaluator outside challenger write authority. Fresh set cannot be recycled as development feedback.

Negative/null/harmful evolution history immutable. Self-certification and self-merge structurally absent.

Fail-closed: no authority promotion when any prerequisite is unresolved or harmful.

Even a positive fresh-transfer result is evidence for host recommendation, not self-merge authority.
